German Quality in Engineering

QUALITY

YESTERDAY, TODAY AND TOMORROW

VWH GmbH

Your demand is our motivation

Since the start of its history, our company has stood for high-quality injection-molding, laser engineering, automation and testing engineering products. We have a wide-ranging pool of expertise, extending from developing initial ideas and designs through the production process and on to packaging management.

Our seamless customer support delivers a straightforward, all-round care-free package which customers across Germany and internationally appreciate for its adaptability and professionalism.

VWH is your specialist for developing customised solutions in toolmaking and mould-making, responding to the latest demands in the era of Industry 4.0 and Smart Factory. Industrial robots, fully automated production lines and technologies for documenting the production flow, with simultaneous data archiving, are now standard equipment.

Like you, we are constantly on the search for new challenges, and are developing technologies and innovations for your future of production.

Consulting, planning and realization right from the first minute

In realising individual projects, we place particular emphasis on close collaboration with our customers. Our motto is "active integration and intensive support".

For that reason, we commit our consultancy expertise even ahead of the project start, in order to optimise your products and plants for the long-term with the benefit of our extensive experience. We develop initial ideas and prototypes and give your ideas their final polish.

There is a constant dialogue in all project phases, ensuring efficient working. Which includes planning and implementing your commission!

Where tradition meets innovation

Automation

We manufacture complex special machines to individual requirements, forming the perfect basis for efficient production. The possibilities we offer are as wide-ranging as your products. Our comprehensive know-how and diverse product portfolio ensure effective results with added value. In addition to assembly and laser plants, we manufacture testing units and robotic units as well as fully automated palletizers.

Molding

Mould-making is another key pillar of our work. We now supply a wide range of sectors with high-quality plastic parts and we are a reliable partner to leading automotive suppliers. The special dimension we offer at VWH is mould-making and plastic parts production, in one and the same location. Initial prototypes and small series are achieved in our in-house technical centre to very short time-frames. That gives you and your products a critical edge!

Engineering

When realizing individual projects, our focus in all project phases is on joint collaboration between ourselves and our clients. Advice and customer service before, during and after the work go! Our teams of experts in Herschbach can handle development and design of items, optimize the product and the production process and oversee project management and production start-up - all on request.
